J1-LED

# ITS HOST Portable Remote Management System

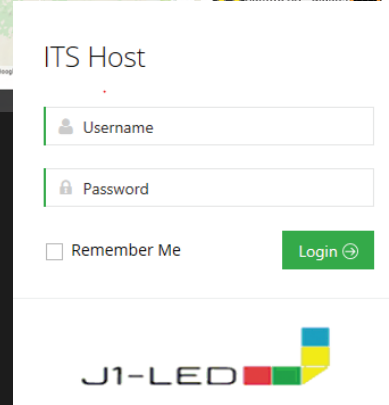

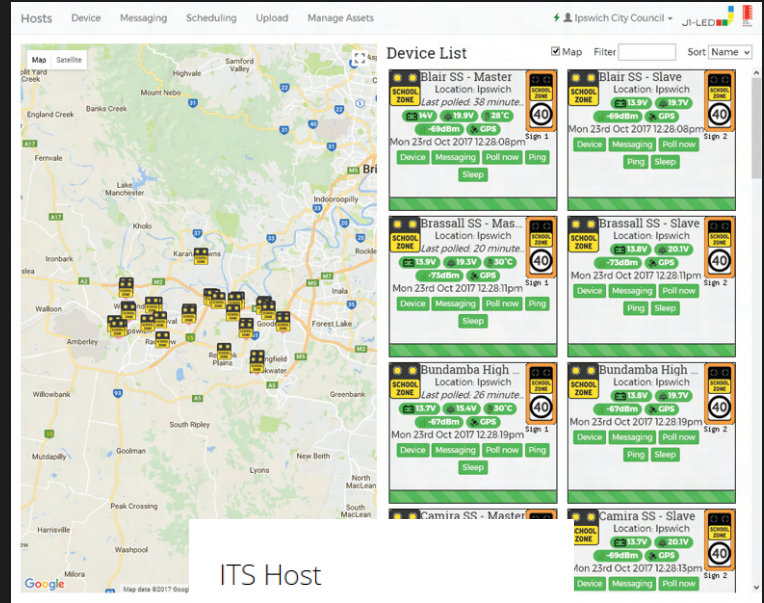

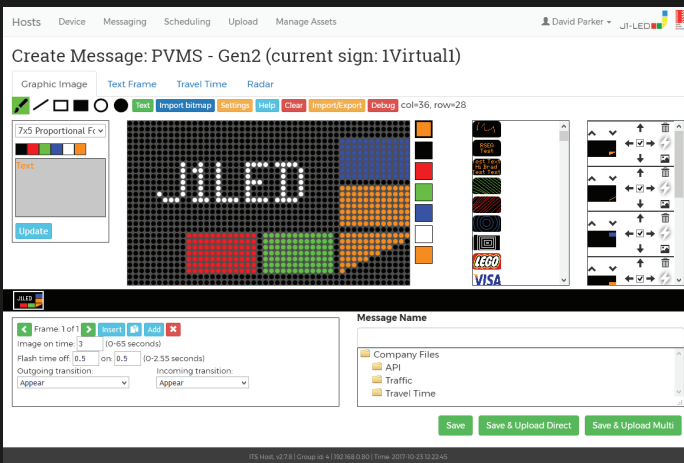

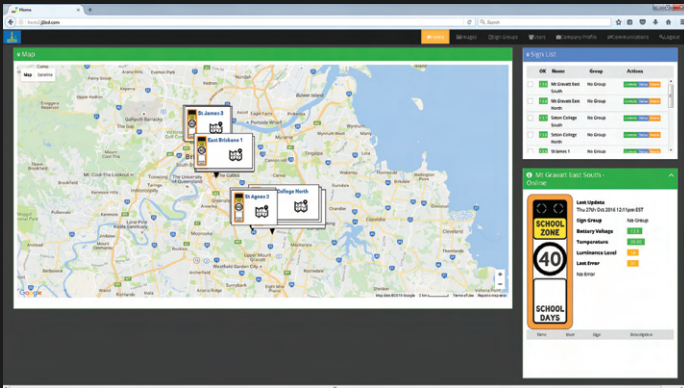

## KEY FEATURES

Our ITS HOST Remote Management System has evolved from a simple sign-update PC-based software tool to the latest technology in Cloud-Hosted IT Solutions. We are now covering the functionality of most J1-LED Products, leveraging real-time analytics for the management of devices. This easy-to-use, browser-based management system is installation free, ensuring it is readily accessible from a variety of mobile devices.

The system can typically show the status of signage, schedule displays, access the predefined image listing, battery voltage & fault monitoring, further system diagnostics, power cycling, GPS locating/tracking and other product-specific functionality.

- Easy-to-use sign management system
- Installation-free
- User-location independent
- For the management of J1-LED signage
- Custom text & graphic editing
